

BANDTRANSPORT EUROPE
CREATORS OF CONVEYOR BELTS

BESPOKE FABRICATION

SLITTING, FABRICATING, PROFILING, COATING

BANDTRANSPORT EUROPE

BESPOKE FABRICATION

Minimise stock levels

Also supplying small cut pieces

The most comprehensive range of fabrication options

Save man-hours and machine costs

Quick supply, competitive prices

Production of fabric-reinforced cleats and other accessories

Bespoke coating, profiling

Outsourcing pays off

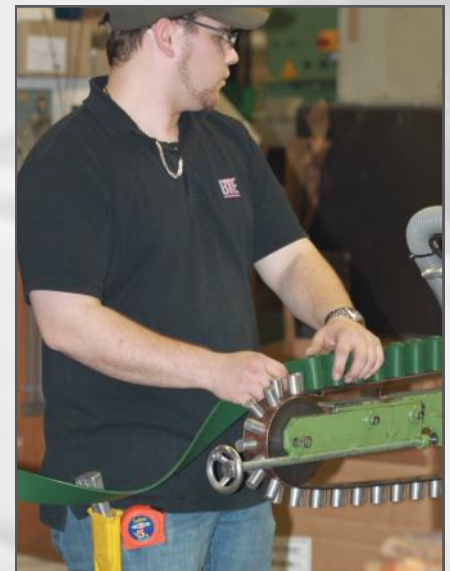

Bandtransport Europe (BTE) is specialised in slitting and assembling conveyor belts, applying extra coatings and profiles and producing cleats and other accessories. We are happy to leave installation at the end user to you, our customer. Many installers, distributors, fabrication and service companies outsource an important part of their fabrication activities to us. As a result they can deploy their people where they yield most: at their customers.

Benefit through collaboration

Through the years BTE has professionalised in all aspects of conveyor belt processing and developed an extensive fleet of machines. This has led to a high level of mechanisation and automation, resulting in quick and accurate execution of tasks, at a permanent high quality.

Other suppliers often require you to order full slabs of belt material. From BTE you can also order smaller cut pieces. We will slit any belt size and make sure it is quickly dispatched, so you can keep stock levels at a minimum.

Owing to our partnerships with first class suppliers we offer a wide range of high quality products. Our skills and knowledge, together with close collaboration with our customers, warrant the high quality of our fabricated end products and will enable you to save considerably on man-hours and machine costs.

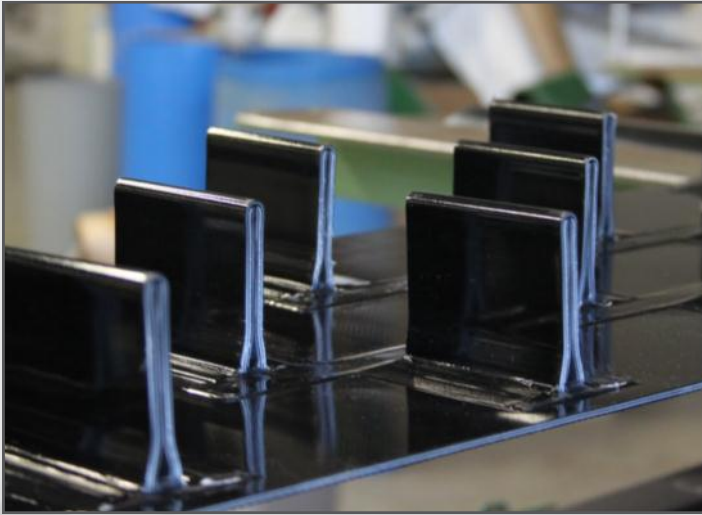

Complete fabrication

In BTE's specialised workshop we carry out all conceivable fabrication activities. Endlessing of belts, application of normal and special cleats, guides, corrugated sidewalls, spill edges and the fabrication of very long belts are just a few of the possibilities.

We take pride in our workshop, one of the best equipped in the world. Our scale of operations and mechanisation enable us to offer our services at very competitive prices. While BTE is preparing your next order, your people can be fitting another belt at your customers.

You will save man-hours and machine costs, need to keep less stock and have a very extensive range of fabrication possibilities at hand.

Production of fabric-reinforced cleats

Production of fabric-reinforced cleats is a time-consuming job, for which you need to keep considerable amounts of material on stock.

Due to the high level of automation of the production process, BTE produces large series of these cleats. This enables quick supply at very competitive prices. Many different styles of these cleats are available, including several special (e.g. extra high) models.

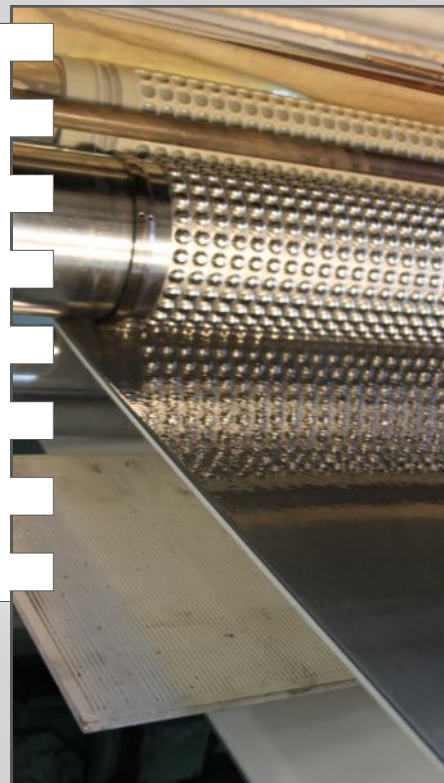

BTE also supplies other types of cleats, guide ropes, corrugated sidewall materials, etc. with short lead times. You will save significantly on time, materials and machine costs. Why still do it yourself?

Coating and profiling

BTE has a special coating and profiling line, on which extra covers or profiles can be applied to existing belt materials. If a standard belt type does not meet the requirements this can be a quick, cost-effective solution.

Extra coatings or profiles can also be applied to smaller pieces of conveyor belt material or to parts of full slabs. Combine the benefit of buying full slabs with extending your range of products. It will add to your flexibility in production of special belt types.

Many of our customers have benefitted from these possibilities, being able to help their customers find solutions for (sometimes long-standing) problems.

The following fabrication activities are carried out according to your specifications:

- Cut pieces, also small sizes, from our extensive range of thermoplastic conveyor belts
- Application of (additional) coatings on existing materials
- Profiling of belt material (also small pieces)
- Full fabrication of conveyor belts: endlessing, application of guide ropes, cleats, corrugated sidewalls, finger cleats, etc.
- Fabrication of very long conveyor belts
- Full fabrication of gauze belts with special edge reinforcements and accessories
- Extensive range of separately available accessories, including cleats, guide ropes, corrugated sidewall material, etc. Please also note our fabric-reinforced cleats
- Lagging of drums and idlers with friction material
- Special designs and processes: please ask our sales department

Outsourcing pays off

By keeping smaller amounts of conveyor belt material in stock and outsourcing slitting and fabrication activities to us you can fully concentrate on the real job: installing the end product at your customer's facilities, as well as service, maintenance and replacement.

Contact us now for more information about your possibilities to effect substantial savings. It will be our pleasure to discuss the options.

Bandtransport Europe BV

Bandtransport Europe BV (BTE) has originated from Fabreeka Bandtransport BV at the end of 2010, after a management buy out. BTE is continuing on Fabreeka's successful journey in development, production and marketing of process and conveyor belts for application in just about every possible industry.

Solutions

Worldwide we have a reputation to uphold, which we hope to further develop over time. We stand for quality, flexibility, speed and reliability. Bespoke consultancy and optimal service levels lead to solutions for the most diverse problems.

Development

At BTE, in conjunction with our suppliers, we continuously invest in research and development. This leads to constant further improvement of the quality and durability of our products and services.

Core values

We are aware that satisfied customers and healthy employees, as well as sustainable products, work environment and investments make a healthy company. This is why quality and sustainability, combined with safety, form the three core values of BTE. In order to realize this we utilize a management system in which our core values have been integrated. The system is based on the standards ISO 9001, ISO 14001 en de OSHAS 18001.
